

How to prevent bugs from entering your house

Step One: Buy a [Suet Feeder Basket](#) from Lowes, Home Depot, Ace, etc. It's just a small metal cage with one openable end. This prevents your pets from contacting the glue board (next step)

Step 2: Buy several boxes of [glue boards](#). Cut each in half as needed. Each box of 4 will yield 8 glue boards when cut in half

Step 3: Place the ½ sheet of glue board inside the suet feeder and close the end. Be careful, for this stuff is really sticky!

Step 4: Place the traps in corners and by every entry way, especially in the garage where the door meets the floor.

Step 5: Stand by for the party to begin. All your [not-so-favorite] bugs will join in.

Step 6: Open the end of the cage, then dump the glue board into the trash, with all the party guests attached. Refill with a new glue board and repeat.
